ABOUT ME

Frontend-focused software developer with professional experience building responsive interfaces for data-heavy dashboards, IoT systems, CRM platforms and web applications. Strong hands-on expertise in ReactJS, Next.js, TypeScript, JavaScript and modern UI development, supported by practical full-stack experience. Experienced in developing reusable components, interactive dashboards, custom CMS platforms and API-driven workflows. Comfortable working across frontend architecture, backend integration, testing, hosting, deployment and SEO configuration. Brings a structured engineering approach with experience across enterprise applications, connected systems and customer-facing websites. Motivated to continue specialising in modern frontend development while contributing confidently across the full stack.

KEY ACHIEVEMENTS

- Built & operated a multilingual resort website & custom PHP 8 CMS covering reusable components, media & admin workflows.
- Delivered ReactJS and TypeScript frontend work for data-heavy dashboards supporting SQL, XLSX and CSV data exploration.
- Developed Next.js interfaces for IoT and file-management solutions using MQTT and LoRaWAN communication protocols.
- Contributed ReactJS and TypeScript CRM modules with unit & functional testing to support customizable business workflows.
- Combined frontend development with hosting, API, testing, SEO & deployment responsibilities across diverse software projects.

WORK EXPERIENCE

FULL-STACK WEB DEVELOPER

DuTACS GmbH

(05/2026 - Present)

Wiesbaden, Germany

- Develop responsive multilingual websites using PHP 8 MVC, vanilla JavaScript, CSS and reusable frontend components.
- Build custom CMS modules for pages, villas, blogs, site settings and media management with intuitive admin interfaces.
- Create reusable UI components and block-based page builder features supporting flexible content creation & site management.
- Integrate translation APIs to deliver multilingual website content across three languages with consistent frontend experiences.
- Connect website forms to CRM platforms through REST APIs, including validation, spam protection and structured submissions.
- Manage hosting and deployment activities across Apache, Plesk, SMTP and cron jobs for reliable website operations.
- Implement responsive, mobile-first layouts using modern CSS practices to provide consistent experiences across devices.
- Configure SEO-related website settings and technical requirements to improve search visibility and maintain site performance.

FRONTEND DEVELOPER

BiSoft Information Technologies

(10/2025 - 02/2026)

Ankara, Turkey

- Develop ReactJS and TypeScript frontend features for Vispeahen, a large-scale enterprise data management platform.
- Build interactive dashboards for SQL, XLSX and CSV datasets with intuitive interfaces for business-focused data exploration.
- Develop reusable React components using class-based architecture to support scalable & maintainable frontend development.
- Implement advanced table filtering and sorting features for efficient navigation and analysis of large datasets.
- Integrate charts and graph plugins to transform complex datasets into interactive and accessible dashboard visualisations.
- Collaborate across frontend & backend development using ReactJS, TypeScript & Spring Boot-based application architecture.

FRONTEND DEVELOPER

Elekon Smart Building Technologies

(05/2025 - 09/2025)

Ankara, Turkey

- Develop responsive user interfaces using Next.js and TypeScript for long-range IoT communication and smart systems.
- Build frontend features for a customised file management system supporting structured digital content and user workflows.
- Work with MQTT and LoRaWAN communication protocols within frontend solutions for connected smart building environments.
- Create reusable interface components and responsive layouts to support consistent experiences across different screen sizes.
- Translate technical IoT requirements into functional interfaces focused on usability, clarity and reliable system interaction.

FRONTEND DEVELOPER

RMA Yapi

(11/2024 - 04/2025)

İstanbul, Turkey

- Develop CRM modules using ReactJS and TypeScript for a customised customer relationship management platform.
- Build reusable frontend components supporting CRM workflows, data management & user interaction across multiple modules.
- Implement responsive interfaces designed around practical business requirements and streamlined customer management.
- Contribute to unit testing and functional testing to validate frontend modules, workflows and expected application behaviour.
- Troubleshoot frontend functionality and refine interface behaviour to improve reliability and overall user experience.

- Support frontend development and testing activities for the BackOffice website within the in-flight retail ecosystem.
- Test application functionality across BackOffice and EPOS mobile solutions, identifying issues during development cycles.
- Contribute to analysis activities by reviewing frontend behaviour, application workflows and functional requirements.
- Assist development activities across web and mobile interfaces while supporting quality and functional validation processes.

- Develop a hyper-casual video game using Unity and C#, covering gameplay mechanics, UI design and functional testing.
- Design and implement game interfaces with interactive UI elements supporting clear navigation and engaging user experiences.
- Develop UI interactions for a puzzle game while applying programming concepts, event handling and interface logic.
- Test gameplay functionality and interface interactions to identify issues and improve overall application behaviour.

EDUCATION

- **B.Sc. Computer Science** | Bilkent University | 09/2020 – 06/2024 | Ankara, Turkey.
- **International Baccalaureate Degree** | TED Ankara College | 09/2011 – 06/2020 | Ankara, Turkey.

PROFESSIONAL SKILLS

- ReactJS & Next.js
 - JavaScript & TypeScript
 - PHP 8 & Java
 - Responsive web development & Mobile-first development
 - UI development & Interactive interfaces
 - Reusable components & Component-based development
 - REST APIs & Third-party API integration
 - Custom CMS & Content management systems
 - Custom CRM & Business application development
 - Dashboard development & Data-driven interfaces
 - SQL & CSV/XLSX data handling
- Charts & Interactive data visualisation
 - Unit testing & Functional testing
 - MQTT & LoRaWAN
 - Object-oriented programming & Design patterns
 - UML & Requirements engineering
 - Git & Source code management
 - Apache/Plesk & Website deployment
 - SEO configuration & Responsive performance
 - UX-focused interfaces & Cross-device compatibility
 - Unity & C#
 - Debugging & Software quality assurance

KEY PROJECTS

LA VANDA — E-COMMERCE FRONTEND

Design + Code | Next.js, TypeScript, CSS Modules

- Designed and developed a complete flower-shop e-commerce frontend using Next.js and strict TypeScript architecture.
- Built a token-based design system where colours and spacing are managed centrally through reusable variables.
- Structured around 75 source files with shared UI primitives including buttons, headers, cards, grids and breadcrumbs.
- Implemented reusable page components, centralised cart state and mobile navigation through a shared root layout.
- Built responsive layouts using a shared breakpoint token and component architecture across desktop and mobile experiences.

PERSONAL SITE — INTERACTIVE PORTFOLIO

Design + Code | React, Vite, Tailwind, Three.js

- Designed and developed a personal portfolio using React, Vite, Tailwind, react-three-fiber and Framer Motion.
- Built reusable section and card components with shared spacing, animation, anchors and data-driven content structures.
- Implemented real-time 3D experiences with WebGL capability detection and fallback handling for unsupported environments.
- Optimised the hero canvas by capping mobile pixel ratio and reducing shadows to limit GPU workload on high-DPI devices.
- Centralised motion variants, typography and spacing scales to maintain consistent visual behaviour throughout the site.

FIVE BAYS RESORT — PROFESSIONAL WEBSITE

Code: Mine | Design: Figma | PHP 8 MVC, JavaScript, CSS

- Developed multilingual luxury resort website using custom PHP 8 MVC CMS built from scratch without framework dependency.
- Created a reusable block library allowing pages to be assembled from configurable UI components through an admin panel.
- Built the frontend using vanilla JavaScript and CSS with a mobile-first responsive approach across three languages.
- Integrated translation APIs and REST-based CRM submissions with validation and spam protection for website enquiries.
